DESCRIPTORS: Sulfites, *Wood pulp, Processing, Sulfate pulp, Mechanical properties, *Bleaching agents.

The unbleached magnesium-bisulfite pulp is characterized by high yield and high strength. When bleached with the sequence chlorine-alkali-chlorine dioxide, a large part of the high yield is lost. The optimum yield of bleached pulp is about 50% compared with 47 to 48% for sulfur dioxide-calcium-sulfite pulp. Magnesium-bisulfite pulp retains its good strength after bleaching. The bleached pulp is somewhat more difficult to beat than the unbleached, but it has the same high breaking and burst strength as the unbleached pulp, which is com-

DESCRIPTORS: *Paper, Wood pulp fibers, Mechanical properties, Microstructure, Test methods.

In this essay, the theories on tearing strength are reviewed, with emphasis on the theory of Van den Akker. The factors determining the tearing strength are of two types; the fibre properties, such as fibre length and strength, and the paper microstructural factors. Among the latter, fibre bindings and paper extensibility are considered to be of particular importance. The influence of these two types of factors on paper tearing strength is illustrated by some simple experiments designed to check the validity of current theories. The

INVESTIGATION OF THE USE OF CALCIUM CARBIDE IN COMMERCIAL CUPOLA OPERATION. [1962] [12]p. 11 refs.
Order from SLA $1.60 62-20086

Trans. of Giessereipraxis (Germany) 1958 [v. 76] no. 11, p. 219-222.

DESCRIPTORS: *Calcium compounds, *Carbides, Cupola furnaces, Additives.

The present report describes the effects of a special grade of calcium carbide which has been developed for use in the cupola furnace. The results of a large number of field tests show that an addition of 2% of "charging carbide" increases the temperature of the iron in the runner by 60°C. If such a temperature increase is not desired, an indirect desulfurization of

Trans. of Ukrainskiy Matematicheskiy Zhurnal (USSR) 1950, v. 2, no. 4, p. 37-63.

DESCRIPTORS: *Differential equations, *Statistical functions, Theory.

The study is made to (1) establish connection between Markov processes and independent increment processes (2) provide general determination of random function differential equations, (3) establish corresponding theorems on their existence and uniqueness, and (4) obtain a large class of Markov processes which are based upon the differential equations concept. The recommended determination of the differential equation is a modification of corresponding constructions of the theory of differential stochastic
